

App Name: FIT NM

Goal:

FIT NM is a personalized fitness and wellness application that helps users improve their health through structured workouts, tailored diet plans, calorie tracking, and direct access to certified instructors.

The app combines familiar fitness-tracking tools with advanced personalization so that users receive guidance suited to their body type, goals, and lifestyle.

2. Core Features

User Accounts

- Sign-up and login using Firebase Authentication.
- User profile with personal details such as age, height, weight, gender, and fitness goals.
- Ability to edit profile information at any time.

Exercise System

- A searchable library of exercises categorized by muscle group, difficulty level, or required equipment.
- Each exercise includes step-by-step instructions, images or videos, and calories burned.
- Automatic generation of a daily workout routine based on user data.
- Option to mark exercises as completed and track weekly progress.

Diet and Calorie Tracking

- Personalized daily meal plans.
- Calorie and macronutrient tracking (protein, carbohydrates, fats).
- Manual food logging or selection from a preloaded list.
- Reminders and notifications for meals and suggested foods to avoid.
- Daily summary of calories consumed versus remaining target.

Instructor Sessions

- Instructors can register and create professional profiles that include gym affiliation, expertise, and location.
- Users can browse instructors in their area.
- Session booking system with time selection and confirmation.
- Instructor dashboard to manage availability and bookings.

Progress and Analytics

- Graphs showing calorie trends, workout consistency, and weight progress.

- Weekly and monthly reports.
- Activity streaks to encourage regular participation.

Notifications and Reminders

- Daily notifications for workouts, hydration, and meals.
- Motivational messages and fitness tips.

Settings and Support

- Options for dark mode, notification preferences, and privacy settings.
- Help section with FAQs and contact form.

3. Screen List for UI/UX Design

Onboarding and Authentication

1. Splash screen
2. Introductory slides (2–3) explaining app features
3. Login screen
4. Sign-up screen
5. Body information setup screen

Main Application

6. Home dashboard (daily overview)
7. Exercise library
8. Exercise details
9. Daily workout plan
10. Diet dashboard
11. Meal details
12. Add food or log meal
13. Instructor list
14. Instructor profile
15. Book session screen
16. Progress dashboard
17. Notification center
18. User profile
19. Settings
20. Help and support

Estimated total: around 20–24 screens.

4. Project Timeline

Phase	Description	Duration	Responsibility
1. Planning	Finalize requirements, define features, gather design references	1 week	You and designer
2. UI/UX Design	Wireframes, prototypes, final UI screens	2–3 weeks	Designer
3. Front-end Development	Build screens in Flutter, handle navigation	3–4 weeks	Flutter developer
4. Back-end Development	Configure Firebase, set up Firestore, implement APIs	2–3 weeks	Backend developer
5. Integration	Connect UI with backend, functional testing	2 weeks	Development team
6. Testing and QA	Fix issues, optimize performance	1–2 weeks	QA/tester
7. Deployment	Publish to Play Store or App Store	1 week	Developer and you

Total estimated time: 10–14 weeks (approximately 2½ to 3½ months) for a complete MVP.

5. Information to Provide to the UI/UX Designer

Design Brief

- **Purpose:** Personalized fitness app offering workout and diet planning along with instructor sessions.
- **Target audience:** Gym-goers, beginners, and home-workout users.
- **Style:** Clean, professional, and energetic—similar to Fitbit or Nike Training Club.
- **Colors:** Sport-inspired palette such as blue and orange, or black and neon green.
- **Typography:** Bold and legible fonts that convey energy and clarity.
- **Tone:** Motivating but not cluttered.

Assets and References

- Feature list and screen list from this document.
- Examples of apps for inspiration: Fitbod, MyFitnessPal, Nike Training Club.
- Expected navigation flow: onboarding → dashboard → exercise/diet → progress → settings.

Design Guidelines

- Use reusable components (buttons, cards, input fields).
- Maintain a consistent style guide with colors, fonts, and icon sets.
- Name screens clearly for development handoff (e.g., “01_Splash”, “02_Login”).
- Deliver prototypes in Figma with connected navigation flow.
- Prepare both light and dark versions if time allows.

6. Technical Stack

Layer	Technology
Front-end	Flutter (Dart, Material 3)
Back-end	Firebase (Authentication, Firestore, Storage, Cloud Messaging)
APIs	Nutrition APIs such as Edamam or Spoonacular; Google Maps API for trainer location
Notifications	Firebase Cloud Messaging
Analytics	Firebase Analytics
Future Options	Stripe or PayPal for trainer payments; AI-based form detection

7. Database Structure (Firestore)

Collection	Example Fields
users	uid, name, height, weight, goal, bodyType, dailyCalories, instructorId
exercises	name, category, muscleGroup, level, equipment, imageURL, videoURL, caloriesBurned
diets	id, name, mealType, calories, protein, carbs, fats, goalType
instructors	uid, name, gym, location, experience, rating, specialization, contact
sessions	userId, instructorId, date, time, status
notifications	title, message, type, userId

8. Summary

FIT NM is designed to be an all-in-one fitness companion.

It provides workout guidance, dietary recommendations, calorie tracking, and access to real trainers in one integrated environment.

The project includes roughly twenty-four screens and can realistically be developed to a functional MVP within three months.

This document outlines the complete structure, scope, and expectations to begin the design process.
